## INTRODUCTION:

TBC<sup>2</sup> is a decentralized cryptocurrency deployed on the Ethereum Network.

Cryptocurrencies deployed on the Ethereum Network are referred to as “ERC20 Compliant” or “Tokens” and are open source for everyone to see.

We decided to deploy on the Ethereum Network to boost user confidence that the TBC<sup>2</sup> network cannot ever be controlled by one entity or admin and deploying as an ERC20 token allows us to utilize third party wallets and block-explorers for full transparency and decentralization.

We decided to create TBC<sup>2</sup> because of the problems that arose in the original TBC, such as the broken wallet network that stopped users from being able to use/send their TBC for over 4 months and admins lack of care to repair these issues, the main reason we made TBC<sup>2</sup> however is because TBC is completely centralized and in complete control of one Admin who has delete accounts, frozen wallets and worst of all is now charging users a fee to access the coins that they have already purchased and turning TBC into a Pyramid Scheme.

We made TBC<sup>2</sup> to give the existing TBC community, who are over a million members-strong now, a decentralized version of TBC. This allows the TBC community to stay intact and continue to use a familiar cryptocurrency.

## INCEPTION:

We, the development team, consist of cryptocurrency developers, computer technicians, website developers, graphics designers, investors and traders from around the globe.

Most of us joined TBC early in 2016 as investors, and put in a lot of time and money to buy TBC and bring in new members. We liked the idea of a membership-driven coin, and admins promises of exchange listing and source code publication when membership was considered “high enough”. It was different, and different can sometimes mean profitable as investors and traders. If the community really could stick to this membership agreement then TBC had a real chance to grow, after-all, FIAT currencies are used as “the going rate” set by the central banks and based on inflation, so TBC COULD work, at least on paper, in reality people do not stick to the membership agreement and often try to sell coins for less than the going rate, human nature unfortunately.

TBC membership was growing nicely but users only had access to web-wallets and an android app, both of which worked well, but with the new membership growing the network started to suffer slower-than-usual-transactions. See, being a closed source cryptocurrency the Admin had (and still has) full control over the mining “network” and as such his “network” could not keep up with the volume of transactions coming through. The decision was made by Admin to change the wallet system, easy to do since he has full control over all TBC funds.

The web-wallets and Android App were trashed and the new TBC004 wallets were created and everyone “moved over” to the new system. The new system however had major problems and transactions were not only slow, but altogether non-existent. With transactions being rejected by the network, sometimes taking days to be rejected, and other times appearing to send but recipients never receiving the transaction into their wallets.

We reached out to Admin, offered our expert help to repair the wallet system and mining network. This help was offered for free and with no strings attached, admin would even retain control of the closed source code and in control of the mining network but would allow others to join and strengthen the network and reduce Admins overhead costs,. Unfortunately Admin rejected our offers out of hand and the wallet system remained (and still remains to this day) broken.

A month after our offers of free help, admin posted a blog about needing money to pay for the wallet system to be repaired (even though we had offered a month before to do this for free) and that there would be at some point in the near future a wallet fee for accessing your TBC account/wallet, it was suggested at the time that this fee would be \$10 paid to Admin in Bitcoin.

Admin has gone even further, and has now frozen every wallet in the system and charged a \$10 fee if you want to be able to use your TBC account. In addition to the Admin Fee, you also have to refer 100 new members in TBC (who will eventually need to pay for access too) and buy \$100 worth of TBC from an Upline. The Admin and 10 of the top-tier members of the TBC community are the only

people with an operational wallet, and in order to buy \$100 worth of TBC from someone, you need to buy from one of those 11 people.

This really got our backs up, Admin is always saying that TBC was made to 'go against' "The Elites", but by freezing wallets, imposing fees and constantly changing the rules of the game, he has styled himself as AN ELITE in the TBC system, in full and absolute control of the entire system, much like a Dictatorship he can freeze your wallets, delete your accounts and block access to your coins that you have paid for and Admin has taken a cryptocurrency that started off as a legitimate thing and turned it into your average MLM Pyramid Scheme which will ultimately end in disaster and hardship for everyone who loses money in this scam.

We decided in August 2017 that enough was enough, and we started to form a small group of developers who know each other well and who are all investors in TBC. We formed the TBC2 developers group and started to discuss making our own cryptocurrency to disrupt Admins plans for TBC.

We deployed the new Ethereum Contract to create TBC<sup>2</sup> in September 2017 and started to develop our new logos and website. We started small and simple, and in order to garner the attention of the TBC community the decision was made to re-use TBC logo and add a large "2" onto it. The admin of TBC was kind enough to bring every ones attention to TBC2 by posting one of our promotional videos talking about TBC2 onto the official TBC blog.

TBC<sup>2</sup> was created as a life-raft to offer to the TBC community. By adopting and using TBC<sup>2</sup> the TBC community can stay intact, but have a real, decentralized cryptocurrency to use for transactions and trading. A cryptocurrency that we can never control once tokens are in your wallets, a cryptocurrency that uses third party wallets and block explorers that we can never control, lock, delete or charge a fee for. A cryptocurrency that can (and will) be added to any public exchange.

TBC<sup>2</sup> is not only for the TBC community. Anyone can buy, use, sell or trade TBC<sup>2</sup>. For those of you reading this who are not part of the TBC community, look at the sheer size of the membership for TBC, there are over 1 million community members, a lot of them use (or used when they could) TBC to purchase, cars, houses, land and general goods and services, imagine the possibility TBC<sup>2</sup> offers when TBC community members start to jump off of the sinking ship called TBC and board our life-raft that is TBC<sup>2</sup>.

	 TBC2	 Bitcoin	 TBC
 <b>Total Supply</b>	1 Billion	21 Million	?*
 <b>Open Source</b>	✓	✓	✗
 <b>Third Party Wallets</b>	✓	✓	✗
 <b>Third Party Miners</b>	✓	✓	✗
 <b>Third Party Block Explorers</b>	✓	✓	✗
 <b>Can it be listed on a public exchange?</b>	✓	✓	✗
 <b>Wallet Access Fee</b>	✗	✗	✓
 <b>Can Admin Disable Your Wallets?</b>	✗	✗	✓

\*Closed source code, admin claims 1 billion total supply, but no way to verify this.

## TBC<sup>2</sup> TOKEN SPECIFICATIONS:

**ERC20 Compliant Ethereum Token deployed on the Ethereum Network**

**Name:** TheBillionCoin2

**Coin Ticker:** TBC2

**Coin Supply:** 1,000,000,000

**Contract Access:** 0xFACCD5Fc83c3E4C3c1AC1EF35D15adf06bCF209C

<https://ethplorer.io/address/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

Deployed on the Ethereum Network, network fees vary depending on the Ethereum Miners and how busy the network is but usually the network fees are under 0.003 Ethereum.

ERC20 tokens employ an open source code that anyone can view.

The network is run by the Ethereum Miners, one of the largest mining networks in the world.

The wallets and block explorers used are third party owned and open source, and therefore no fees can be charged by us for wallets and everything is transparent.

## WALLETS:

You can use a range of wallets for TBC<sup>2</sup> but you must use an ERC20 Compatible wallet. We recommend using MyEtherWallet ([www.myetherwallet.com](http://www.myetherwallet.com)) or IMToken app on Android or IOS as these are user friendly and light-weight (i.e. do not require you to install and sync with the Ethereum network which is large and can take a long time).

Other wallets that can be used are listed below – An up to date list of compatible wallets can be found on our website [www.tbc.erc20.club/wallets](http://www.tbc.erc20.club/wallets)

MetaMask (Firefox and Chrome browser add-on) - <https://metamask.io>

Mist (Desktop) - <https://github.com/ethereum/mist/releases>

Parity (Desktop) - <https://parity.io/parity.html>

**WARNING** – Do not use an Ethereum Address from a non-ERC20 compatible wallet. If you use a non-ERC20 compatible wallet your coins could be lost irreversibly and we cannot assist with recovery.

If you have an Ethereum Wallet, that you control the PRIVATE KEYS for then it is most likely compatible or at the very least you could import your Private Keys into a new compatible wallet. Again, we cannot offer support for this.

## BLOCK EXPLORERS:

TBC<sup>2</sup> utilizes third party block explorers, this allows for full transparency.

You can find TBC<sup>2</sup> on:

Etherscan:

<https://etherscan.io/token/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

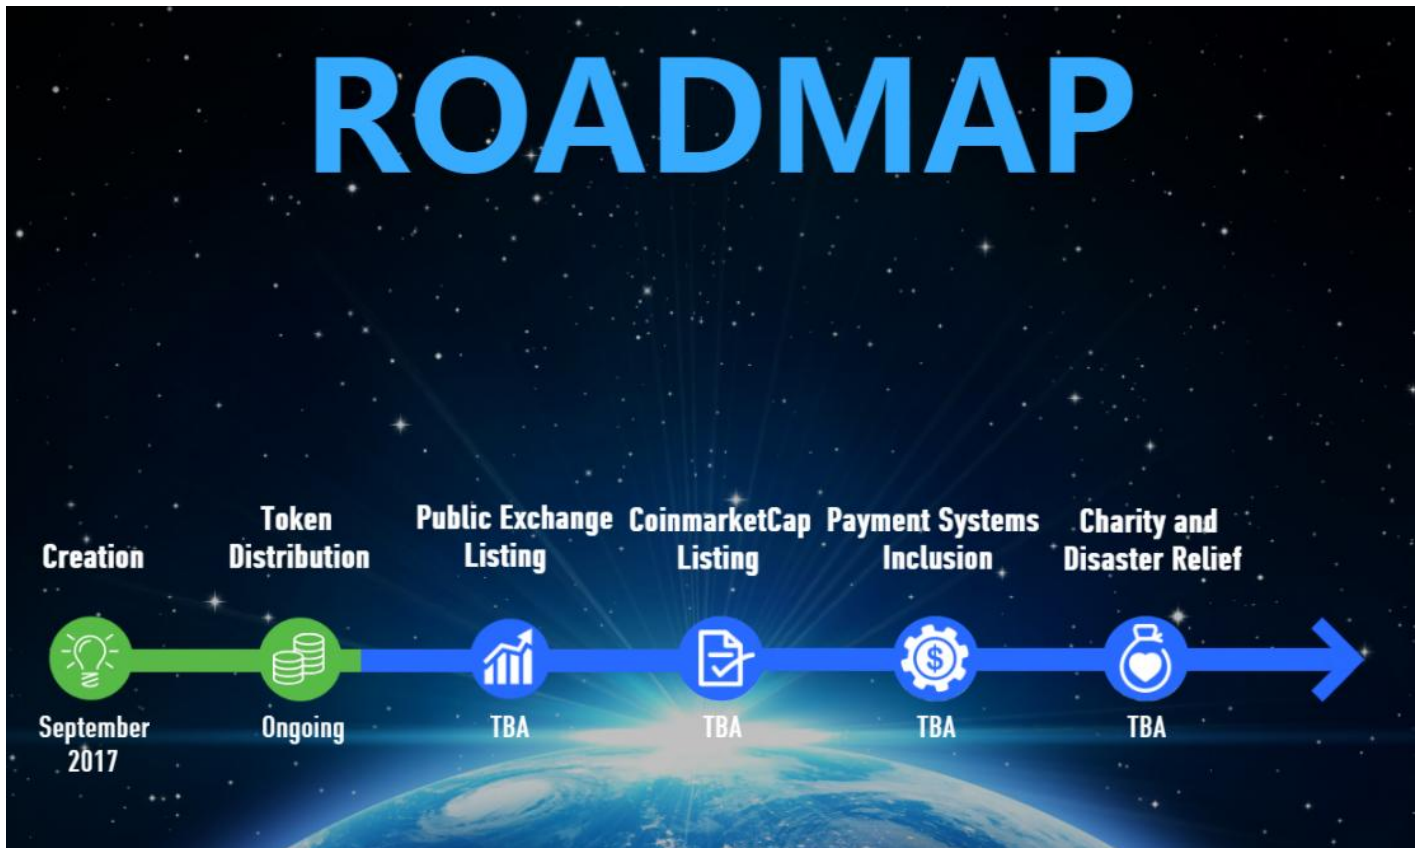

Ethplorer:

<https://ethplorer.io/address/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

## ROADMAP:

You can see from the Roadmap Graphic above what our immediate plans for TBC<sup>2</sup> are. We have already created the token and we are now in the distribution phase.

### **Distribution Phase:**

Distribution is being carried out via our own website and a payment processor. We are accepting most well known cryptocurrencies in exchange for TBC<sup>2</sup> payments.

Distribution is taking place over 9 rounds with 100 million tokens in each round.

As each round completes the next round starts and the price increase a small amount.

**Exchange Listing:**

Following completion of round 9 of the distribution phase we will be listed on a public exchange. We have already discussed with several exchanges to be listed after distribution and following round 1 completion we will be finalizing those deals. Once finalized the exchange(s) will be announcing publicly through their own outlets that the listing will do live following our distribution phase completion.

**CoinmarketCap Listing:**

In order to be listed on CoinmarketCap you must first be listed on a public trading exchange and meet some parameters such as 24h trading volume. Following exchange listing as above we will submit our request to CoinmarketCap and we will do everything in our power to ensure we are listed on CoinmarketCap.

**Payment System Inclusion:**

After being listed on a Public Trading Exchange and CoinmarketCap we will submit our requests to payment processors in order to have TBC<sup>2</sup> added as an option to make payment anywhere that Bitcoin is accepted. This could then further lead to platforms such as Shapeshift and further lead to debit card system inclusions.

**Charity and Disaster Relief:**

We have set aside 25 million TBC<sup>2</sup> tokens for Charity and Disaster Relief aid.

In recent months we have seen many natural disasters, such as earthquakes and hurricanes and although people are out in force to help the people affected, more money is always needed to help aid these communities and people.

It is our intention that when TBC<sup>2</sup> distribution phase has ended and the token is publicly listed on exchanges that we will run further sales campaigns to sell some of these tokens. ALL funds raised from this supply going towards our charity account where donations will be made accordingly.

## TBC<sup>2</sup> DISTRIBUTION PHASE:

TBC<sup>2</sup> distribution phase is being run through 9 rounds. Each round contains 100 million TBC<sup>2</sup> tokens and the price increases slightly with each round.

R1: \$0.002

R2: \$0.004

R3: \$0.006

R4: \$0.008

R5: \$0.01

R6: \$0.0125

R7: \$0.0150

R8: \$0.0175

R9: \$0.020

A keen eye will note that 9 rounds with 100m coins per round will leave 100 million tokens in our control.

45 million tokens has been allocated as incentives to pay promoters to raise awareness about TBC2.

30 million tokens has been allocated for promotions, bounties/rewards, exchange listings etc.

25 million tokens as above has been allocated to Charity and Disaster Relief.

Information regarding the distribution phase can be found at the bottom of the Purchase Page on our website at [www.tbc.erc20.club/purchase](http://www.tbc.erc20.club/purchase)

You can also see FULL and TRANSPARENT information about each of our wallets in the news section on our website [www.tbc.erc20.club/out-wallets](http://www.tbc.erc20.club/out-wallets)

## STAYING UP TO DATE:

The best way to stay up to date with current TBC<sup>2</sup> affairs after this white paper is through our website at [www.tbc.erc20.club](http://www.tbc.erc20.club)

The [news section](#) on the main website is where all news will be released first, followed by our Facebook and Twitter social media accounts (links on the main website).

## CLOSING STATEMENT:

TBC<sup>2</sup> is a legitimate cryptocurrency deployed on the Ethereum Blockchain.

TBC<sup>2</sup> is transparent and open source.

TBC<sup>2</sup> can be listed on public exchanges.

We, the developers, can never charge you a fee to access your wallet.

We can never lock your wallet, or stop you using your TBC<sup>2</sup>.

If someone tells you TBC<sup>2</sup> is a scam, ask questions.

What makes TBC<sup>2</sup> a scam?

What does that person have to gain by telling you TBC<sup>2</sup> is a scam? Do they want you to buy TBC from them? Do they want you to be a downline of theirs?

What do they have to lose if you do not believe them? Is it Admin saying TBC<sup>2</sup> is a scam? Admin has a lot to lose if people stop believing in TBC.

Most of all, above everything else. Do.Your.OWN.Research.

Everything about TBC<sup>2</sup> is open and transparent, you can find all the information you need in this white paper and on the website. TBC by comparison is a closed

source cryptocurrency being controlled by one central admin. If that admin disappears one day or decides they want to shut down the entire TBC network, there is literally nothing that anyone can do about it, once the servers go off, there is no way to access or recover coins, this is not an issue with TBC<sup>2</sup> because even without us, the developers, TBC<sup>2</sup> remains in the Ethereum blockchain, controlled by the Ethereum Network. Even if we decided not to get TBC<sup>2</sup> onto an exchange, anyone else could, even if we decided not to pursue CoinmarketCap listing, anyone else could, this is what it means to be truly decentralized. If you own some TBC<sup>2</sup> then the power is with YOU, not with US!

Already included above is a comparison chart that one of our community members made for us, but for a hi-res version you can view here: <https://goo.gl/2hbaXq>
