INTRODUCTION:

TBC² is a decentralized cryptocurrency deployed on the Ethereum Network.

Cryptocurrencies deployed on the Ethereum Network are referred to as “ERC20 Compliant” or “Tokens” and are open source for everyone to see.

We decided to deploy on the Ethereum Network to boost user confidence that the TBC² network cannot ever be controlled by one entity or admin and deploying as an ERC20 token allows us to utilize third party wallets and block-explorers for full transparency and decentralization.

INCEPTION:

We, the development team, consists of cryptocurrency developers, computer technicians, website developers, graphics designers, investors and traders from around the globe.

We created TBC² because of the problems that arose in the original TBC, such as the broken wallet network that stopped users from being able to use/send their TBC and the admins lack of care and knowledge to repair the issues.

In addition TBC is centralized, with a closed source code and in complete control of

“Admin” who has deleted accounts, frozen wallets and started to charge users a “wallet access fee” to access the coins already purchased, essentially turning TBC into a Pyramid Scheme.

With the ongoing problems, and the admins inability to fix the issues, despite our offers of help, in August 2017 we decided that enough was enough, and we formed a small group of developers who know each other well and who were all investors in the original TBC. We formed the TBC2 developers group.

We knew from the start that we wanted to give the existing TBC community a decentralized ‘version’ of TBC as we value the original ethos of a global community-driven coin. Developing TBC2 allows the TBC community to stay intact and continue to use a familiar cryptocurrency but in a decentralized, non-controlled manner, with a real market value, not an unrealistic “valuation” system.

We deployed the new Ethereum Contract to create TBC² in September 2017 and started to develop our new logos and website.

	 TBC2	 Bitcoin	 TBC
 Total Supply	1 Billion	21 Million	?*
 Open Source	✓	✓	✗
 Third Party Wallets	✓	✓	✗
 Third Party Miners	✓	✓	✗
 Third Party Block Explorers	✓	✓	✗
 Can it be listed on a public exchange?	✓	✓	✗
 Wallet Access Fee	✗	✗	✓
 Can Admin Disable Your Wallets?	✗	✗	✓

*Closed source code, admin claims 1 billion total supply, but no way to verify this.

TBC² TOKEN SPECIFICATIONS:

ERC20 Compliant Ethereum Token deployed on the Ethereum Network

Name: TheBillionCoin2

Coin Ticker: TBC2

Coin Supply: 1,000,000,000

Contract Access: 0xFACCD5Fc83c3E4C3c1AC1EF35D15adf06bCF209C

<https://ethplorer.io/address/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

Deployed on the Ethereum Network, network fees vary depending on the Ethereum Miners and how busy the network is but usually the network fees are under 0.003 Ethereum.

ERC20 tokens employ an open source code that anyone can view.

The network is run by the Ethereum Miners, one of the largest mining networks in the world.

The wallets and block explorers used are third party owned and open source, and therefore no fees can be charged by us for wallets and everything is transparent.

WALLETS:

You can use a range of wallets for TBC² but you must use an ERC20 Compatible wallet. We recommend using MyEtherWallet (www.myetherwallet.com) or IMToken app on Android or IOS as these are user friendly and light-weight (i.e. do not require you to install and sync with the Ethereum network which is large and can take a long time).

Other wallets that can be used are listed below – An up to date list of compatible wallets can be found on our website www.tbc.erc20.club/wallets

MetaMask (Firefox and Chrome browser addon) - <https://metamask.io>

Mist (Desktop) - <https://github.com/ethereum/mist/releases>

Parity (Desktop) - <https://parity.io/parity.html>

WARNING – Do not use an Ethereum Address from a non-ERC20 compatible wallet. If you use a non-ERC20 compatible wallet your coins could be lost irreversibly and we cannot assist with recover.

If you have an Ethereum Wallet, that you control the PRIVATE KEYS for then it is most likely compatible or at the very least you could import your Private Keys into a new compatible wallet. Again, we cannot offer support for this.

BLOCK EXPLORERS:

TBC² utilizes third party block explorers, this allows for full transparency.

You can find TBC² on:

Etherscan:

<https://etherscan.io/token/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

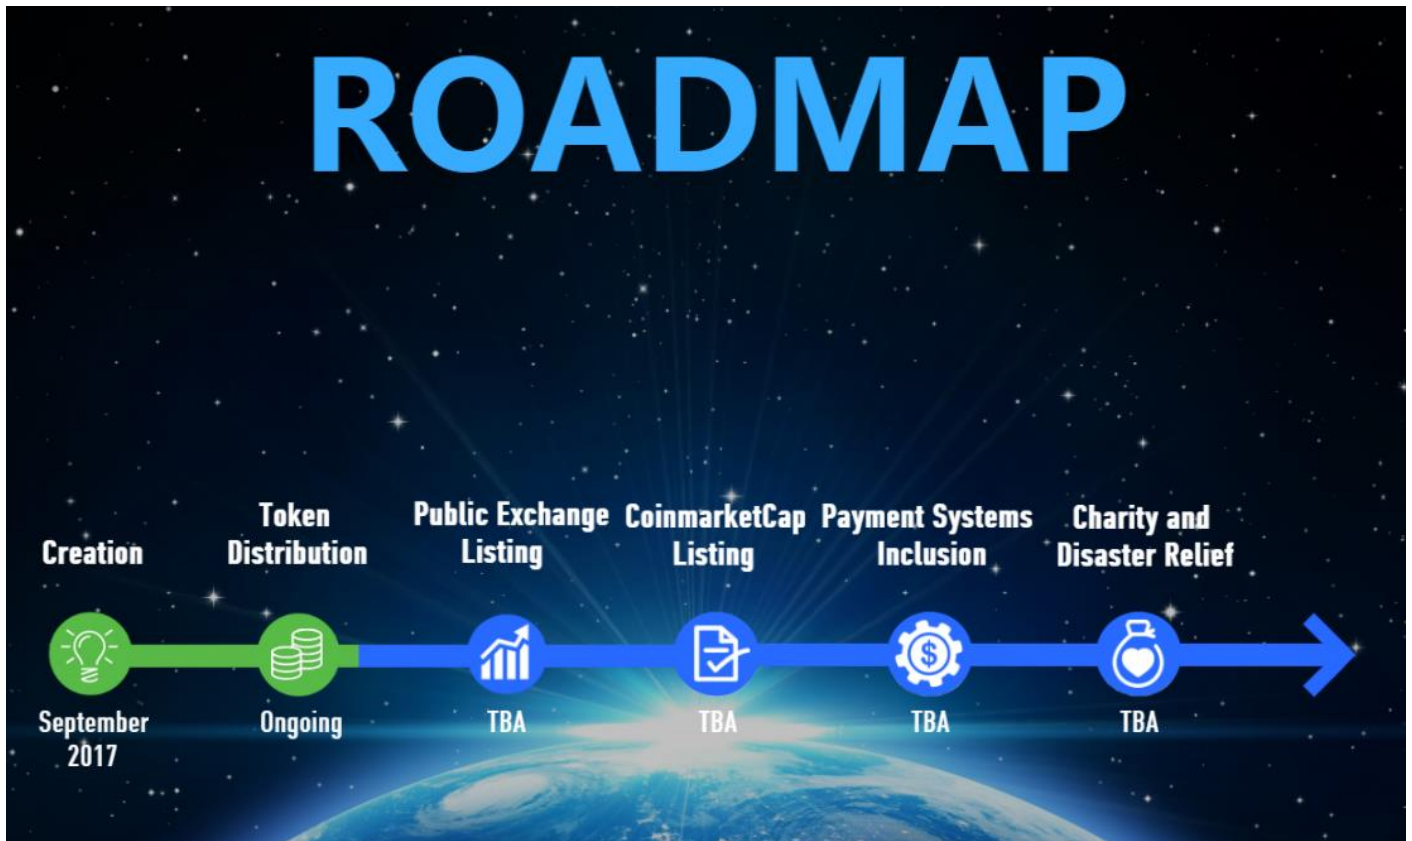

Ethplorer:

<https://ethplorer.io/address/0xfaccd5fc83c3e4c3c1ac1ef35d15adf06bcf209c>

ROADMAP:

You can see from the Roadmap Graphic above what our immediate plans for TBC² are. We have already created the token and we are now in the distribution phase.

Distribution Phase:

Distribution is being carried out via our own website and a payment processor. We are accepting most well known cryptocurrencies in exchange for TBC² payments.

Distribution is taking place over 9 rounds with 100 million tokens in each round.

As each round completes the next round starts and the price increase a small amount.

Exchange Listing:

Following completion of round 9 of the distribution phase we will be listed on a public exchange. We have already discussed with several exchanges to be listed after distribution is complete.

CoinmarketCap Listing:

In order to be listed on CoinmarketCap you must first be listed on a public trading exchange and meet some parameters such as 24h trading volume. Following exchange listing as above we will submit our request to CoinmarketCap and we will do everything in our power to ensure we are listed on CoinmarketCap.

Payment System Inclusion:

After being listed on a Public Trading Exchange and CoinmarketCap we will submit our requests to payment processors in order to have TBC² added as an option to make payment anywhere that Bitcoin is accepted. This could then further lead to platforms such as Shapeshift and further lead to debit card system inclusions.

Charity and Disaster Relief:

We have set aside 25 million TBC² tokens for Charity and Disaster Relief aid.

In recent months we have seen many natural disasters, such as earthquakes and hurricanes and although people are out in force to help the people affected, more money is always needed to help aid these communities and people.

It is our intention that when TBC2 distribution phase has ended and the token is publicly listed on exchanges that we will run further sales campaigns to sell some of these tokens. ALL funds raised from this supply going towards our charity account where donations will be made accordingly.

TBC² DISTRIBUTION PHASE:

TBC² distribution phase is being run through 9 rounds. Each round contains 100 million TBC² tokens and the price increases slightly with each round.

R1: \$0.002

R2: \$0.004

R3: \$0.006

R4: \$0.008

R5: \$0.010

R6: \$0.0125

R7: \$0.0150

R8: \$0.0175

R9: \$0.020

A keen eye will note that 9 rounds with 100m coins per round will leave 100 million tokens in our control.

45 million tokens has been allocated as incentives to pay promoters to raise awareness about TBC2.

30 million tokens has been allocated for promotions, bounties/rewards, exchange listings etc.

25 million tokens as above has been allocated to Charity and Disaster Relief.

Information regarding the distribution phase can be found at the bottom of the Purchase Page on our website at www.tbc.erc20.club/purchase

You can also see FULL and TRANSPARENT information about each of our wallets in the news section on our website www.tbc.erc20.club/out-wallets

STAYING UP TO DATE:

The best way to stay up to date with current TBC² affairs after this white paper is through our website at www.tbc.erc20.club or www.tbc2coin.com

The news section on the main website is where all news will be released first, followed by our Facebook and Twitter social media accounts (links on the main website).

CLOSING STATEMENT:

TBC² is a legitimate cryptocurrency deployed on the Ethereum Blockchain.

TBC² is transparent and open source.

TBC² can be listed on public exchanges.

We, the developers, can never charge you a fee to access your wallet.

We can never lock your wallet, or stop you using your TBC².

Everything about TBC² is open and transparent, you can find all the information you need in this white paper and on the website.
